

## REVIEW

**on the monograph "The theory and methodology of selection in Olympic sports trials",  
authors: Manolachi Veaceslav, Budevici-Puiu Anatolie, Manolachi Victor**

The monograph was approved at the session of the State University of Physical Education and Sports Senate with the financial support of the Academy of Sciences of Moldova, by participating in the announced project.

In the book which is made up of six chapters, are exposed the general principles that imply the multitude of applicative knowledge, the selection of Olympic sports trials as well as the basic regularities of children's development.

The materials of the modern scientific researches are widely treated as well as the advanced sports practice which is related to the empirical part that determines the formation of the principles, regularities and methods of selection application.

Thus, it is characterized the methodology and the criteria used in the medical and sport selection. There are analysed the issues on the theoretical principles of primary selection of children and adolescents.

The basis of the monograph content is the contemporary and modern conceptions, gathered both in the field of sports selection theory and methodology, as well as in the departments of physiology, biochemistry, morphology, genetics, biomechanics, psychology, which include a series of generally valid attitudes from the scientific point of view and concrete sports trials.

The use of the notion "selection" as essential refers not only to centralized sports training but also to the whole multi-year process of improvement that contributes to the wider treatment of theoretical functions, regularities and principles as well as the notions and terms of this field. The results of the authors' own research as well as of their pupils are largely reflected in the monograph. The monograph is intended for students, academics, managers of sports organizations, federations, clubs, associations and coaches in the field of physical culture and sports.
